Kim Segal
Biolase
Fax: 817-430-9690

I wanted to take a moment and write you this morning. We were so pleased with the month of treatment that Dixie, our red miniature dachshund, received through Biolase. When she first started with you in January, she was unable to take any steps. She was at the outset able to wag her tail and also had bowel and bladder control. She began taking some steps consistently after about 5 or 6 treatments. From there, she progressed steadily. About two days ago, she was walking consistently around the house and even ran to the window to bark at a dog passing by! The vet thought she would regain at best 60 percent of her former walking ability, but Dixie well surpassed that prediction. Although Dixie did get Adequan injections and Shaklee nutritional products as part of her treatment regime, it was clear to us that the laser treatments were what made the difference. Each improvement in Dixie's ability to walk appeared within 12 to 24 hours after a treatment; so it was obvious that this was a direct connection.

Sincerely,

Kathleen Coleman
